

Biometric Fingerprint Scanner

The U.are.U 4000 is a USB fingerprint sensor designed for use with DigitalPersona's U.are.U applications and developer tools.

- The user simply places his/her finger on the glowing sensor window, and the device quickly and automatically captures the fingerprint image. On-board electronics calibrate the device and encrypt the image data before sending it over the USB interface.
- DigitalPersona products utilize optical fingerprint scanning technology for superior image quality and product reliability.

Data Age software products utilize this device to quickly log employees into the software application without the need for login names and passwords. This also allows management overrides throughout the system by the manager placing his or her finger on the pad rather than trying to type in a password and trying to protect it from being seen and used by others.

This device can also be used for customer verification. Whereas a customer can have his or her fingerprint on file and can verify that they are who they say they are. This is a great verification tool to minimize identification fraud.
